

ABSTRACT OF THE DISCLOSURE

To solve a trouble of electric wires bitten by a base board and a case in assembling process, an auxiliary device module Z comprises a base board 2 with a terminal 8v mounted on an auxiliary device, a case 3, and a junction circuit 5 including a first electric connecting portion 31 with a terminal 8x, a second electric connecting portion 40 with a terminal 8y and a base board 6c. The case 3 is formed with a connector housing 33 correspondingly to the first electric connecting portion 31. A connector 30 is contained in the case 3 by mounting the first electric connecting portion 31 on the connector housing 33. The terminal 8v of the base board 2 and the other terminal 8y of the second electric connecting portion 40 are connected by mounting the base board 2 on the case 3.
